CTS-3300V

DIGITAL VETERINARY ULTRASOUND IMAGING SYSTEM

Small Animals
Large Animals

For years veterinary ultrasonic systems from SIUI have been used in places such as farms, veterinary clinics and zoological gardens. The CTS-3300V, designed specially for the users, is the new generation digital veterinary ultrasound. Based on the transplanted high-end medical ultrasound technical platform, the CTS-3300V is endorsed with excellent imaging quality and practical operation procedures, together with users' application preference and comments.

Image Storage and Communication

- Large Capacity CineLoop: to capture flashing-by images and select the best one for diagnostic purpose.
- USB Port: for easy exchange of scanned images.
- Image Storage System: to review complicated cases, easy for the second diagnosis.

Abundant Application Software

The CTS-3300V can be used on animal exams such as bovine, equine, ovine, feline and canine. With abundant application software, it shall meet different user needs.

Ergonomic Design

- B-TGC Gain Control: Images are smoother and finer from near field to far field.
- B gain and M gain can be adjusted separately.
- Backlit Silica-gel Keyboard: More durable, more suitable for operation in the dark room.
- Dual Probe Port: In combination with one-button switch for the desired probe, ensuring an easy and stable operation.
- Integrated Trolley Design: The trolley is the perfect match for the system.

B gain and M gain can be adjusted separately
